

Calbrite™ EMT CONDUIT (Type 304SS)

Calbrite™ stainless steel EMT conduit and fittings, appropriately utilized, provide all the usual benefits of stainless steel. The thinner walled EMT stainless steel conduit can be used in less stressful and non-environmentally threatening conditions such as forklift traffic, hand trucks and carts, and in other environments typically found in an industrial setting. This includes superior performance in applications needed in corrosive environments where harsh chemical treatments or washdowns are required. As an added benefit, EMT Stainless steel

is more pliable, allowing easier installation.
